2. Mounting procedure

Take the cartridge out of the packaging. To avoid damage, we recommend leaving the stylus guard on the cartridge while mounting the cartridge onto the tonearm.

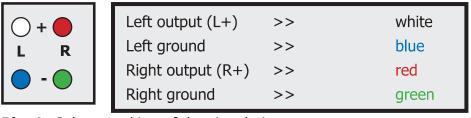

Use the screws provided to mount your **Clearaudio** MC cartridge (the cartridge threads in the body comply with the metric standard for M 2.5mm screws and have the standard spacing of 12.7mm).

Be careful not to over-tighten the screws as they may strip the threaded holes.

Now connect the pins of your **Clearaudio** cartridge to the jacks of the headshell or tonearm cable, taking care not to use too much force.

If necessary, you can use suitable precision pliers or tweezers for assistance.

Please note the colour coding below in order to ensure the correct phase in music playback, otherwise an audible sound deterioration would result.

We recommend the following order of assembly:

- 1. Mount the MC cartridge into the tonearm.
- 2. Connect the tonearm or turntable ground with the preamplifier ground (before plugging in the electrical power supply).
- 3. Plug the tonearm cable into the phono inputs of your preamplifier.
- 4. Turn down the volume control to a minimum position (position 0).
- 5. Plug the mains power cord into your electrical power supply.

Our tip for mounting the cartridge:

Choose a bright workplace and good tools, and take your time so you can concentrate.

3. Adjustment of the tracking force

Carefully remove the stylus guard from the cartridge by grasping it with your thumb and forefinger and gently pulling it forward.

The correct tracking force of your cartridge can be found in the technical data in this user manual. Please only use these values, since if the tracking force is too light (1g or less) the cartridge could jump out of the record groove and damage the needle.

However, you should never set a tracking force of more than 5g as this could cause damage to the diamond and thus to the cartridge. In the event that it is not possible to set the optimal tracking force due the cartridge being too light, you should use a spacer plate available from your **Clearaudio** importer/dealer.

Further valuable information for the correct adjustment of your cartridge can be found in the respective user manual of the turntable and/or tonearm manufacturer.

4. Special instructions

- Before playing a record, please remove all dust and dirt from the record's surface using a quality cleaning device. For the best results, a record cleaning machine should be used.
 Ask your dealer about Clearaudio's record cleaning machines.
- Always keep the stylus tip clean. When dirt is allowed to build up and records are played with a dirty or clogged stylus, a buzzing noise may be heard. Use a soft brush or a high quality cleaning brush or Clearaudio cleaning fluid (Art. No. AC003) to clean the stylus tip. Be extremely careful and always brush only from back to front. When using a liquid e.g. from Clearaudio or other organic cleaner, always take care not to spill any on the cartridge body. Make sure the liquid only contacts the stylus tip or boron cantilever. Avoid storing the cartridge near devices with electrical transformers and motors that can generate magnetic fields. Any demagnetization could lead to a loss of the output voltage and thus to a distortion or deterioration of the sound.

• Please note:

Never disconnect your tonearm cable from your pre-amplifier while your unit is still on. Please switch your pre-amplifier off before starting to disconnecting your tonearm connectors from the phono inputs of your pre-amplifier.

- Always use the original packaging when shipping the cartridge and secure the stylus guard with a rubber band.
- If any service or repair to a **Clearaudio** product is necessary, please contact your dealer / distributor.
 We can advise you of your nearest service location.
